

FitSense

PHASE 02 OF 08 | REQUIREMENT ANALYSIS

Project overview

FitSense is described as a modular REST API for recording workouts and helping users understand progress. The brief covers authenticated personal records, workout search and management, fitness statistics, and Gemini-based recommendations informed by user goals and experience.

Project description

A fitness-tracking API for secure workout records, searchable history, performance insights, and personalized recommendations.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- Secure workout history
- Workout search and management
- Fitness statistics
- Goal-aware AI recommendations

Phase description

Turn the validated problem into functional, non-functional, data-flow, and technology requirements.

Project-specific phase focus

Define workout records, user privacy, search, fitness metrics, and recommendation inputs.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Map the customer journey and touchpoints
- [] Diagram system data flows
- [] Document functional and non-functional requirements
- [] Choose and justify the technology stack
