

FitSense

PHASE 03 OF 08 | PROJECT DESIGN PHASE

Project overview

FitSense is described as a modular REST API for recording workouts and helping users understand progress. The brief covers authenticated personal records, workout search and management, fitness statistics, and Gemini-based recommendations informed by user goals and experience.

Project description

A fitness-tracking API for secure workout records, searchable history, performance insights, and personalized recommendations.

Project status

Not stated in the source brief. Update this document when the team records an agreed status.

Project capabilities

- Secure workout history
- Workout search and management
- Fitness statistics
- Goal-aware AI recommendations

Phase description

Check problem-solution fit and describe the proposed solution and its architecture.

Project-specific phase focus

Design the authenticated workout and insight flows around a user's goals and experience.

Phase status and progress

Status: Not stated in the source material.

Progress: Not recorded in the source material.

Tasks and requirements

- [] Complete the problem-solution fit canvas
- [] Describe the proposed solution and user value
- [] Diagram the solution architecture
